James Fenn

Full-stack software developer

+1 (412) 759-3822 | me@jfenn.me | https://jfenn.me | @fennifith

About

I focus mainly on mobile application development for Android devices, along with front-end and back-end web development. In addition to Java and HTML/CSS, I have experience with Kotlin, NodeJS, Java, SQL, Bash, and a variety of other programming languages for various purposes.

I have built custom software solutions from the ground up, using tools like Git, Docker, and Gradle to create an efficient and reliable workflow.

My non-professional interests include running, cross-country skiing, and playing the piano.

Experience

Software Developer at Trevian Intl.

trevian.io — *May 2019 — Current*

I worked to develop and administrate a variety of web services for our clients, including a form processing application, a data visualization library, and a custom platform for website management.

Assistant Instructor at Upstream Coding

upstreamcoding.com — *May 2019 — August 2020*

Upstream Coding provides a supportive environment for people who are already in the job market to learn programming skills.

I worked as an assistant instructor helping to teach a few classes, answer questions, and assist students with coursework. I also took a role developing several parts of their website and backend services using React, TypeScript, and NodeJS.

Android Developer at Lemonade Social

lemonade.social — *June 2017 — January 2018*

Open Source

I have a strong passion for the Open Source movement and often involve it in my work; with the amount of technology it envelops, OSS is a critical component of the software industry.

In my spare time, I sometimes develop tools and libraries for personal use, many of which I publish under an Open Source license. This allows others to benefit from them and contribute their own improvements, and it enables me to form a supportive community which can ensure their continued development.

Alarmio

alarmio.site

A simple alarm clock that integrates many useful features with a simple design. Notably, it supports multiple time zones, stopwatch and timer functions, and internet radio.

Metronome

bit.ly/2Z3bs3l

A lightweight and intuitive metronome app for Android. It includes multiple sounds, touch input, and dynamic theming capabilities.

Ktor Docs

bit.ly/3hWgu98

A library for Ktor/JVM servers that enables declarative inline documentation of REST API endpoints, compatible with OpenAPI specification.

Attribouter

bit.ly/331cwFY

A lightweight about screen builder for Android apps which displays contributors and open source libraries, saving time and effort in documentation and discoverability.

Education

University of Pittsburgh

2018 — 2022 (est)

I am currently a third-year student working towards a degree in Computer Science.
